Derived Field

Business logic		
SIS Fields	Source	Conditions
Race Ethnic – Hispanic indicator (RF0082) (N N N N N N)	For Hispanic indicator: REG_PERSONAL 1: Y - Hispanic – Hispanic indicator	If reg_personal.hispanic = Y, then Y else N (Y N N N N N)
Race Ethnic – Race (RF0082) (N N N N N N)	REG_PERSONAL/REG_ETHNICITY Y 2: Y - I – Native American/Alaskan Native 3: Y – A -Asian 4: Y – B - Black 5: Y – P – Pacific Islander/Hawaiian 6: Y – W – White	When reg_ethnicity has I or reg_personal.ethnic_code=I Then (N Y N N N N) – Native American/ Alaskan When reg_ethnicity has A or reg_personal.ethnic_code=A (N N Y N NN) – Asian When reg_ethnicity has B or reg_personal.ethnic_code=B Then (N N N Y N N) – Black When reg_ethnicity has P or reg_personal.ethnic_code=P Then (N N N N Y N) – Pacific Islander/ Hawaiian

		<p>When reg_ethnicity has W or reg_personal.ethnic_code=W Then (N N N N N Y) – White</p>
--	--	--

Business rules :

- Hispanic indicator is not a race. A race has to be selected regardless of Hispanic indicator. Hispanic indicator is pulled from Reg_personal table Hispanic field. If this field is marked as Y then SIS is pulling Y for this place holder (**Y** N N N N N) for race field
- To find out Race, ethnic code field will be checked in Reg_personal table for codes I, A, B, P, W OR any records in Reg_ethnicity table for the same codes. SIS Race ethnicity will be set as the data found in these tables
- (NNNNNN)
- Ethnic code I - Native American / Alaskan (N **Y** N N N N)
- Ethnic code A – Asian (N N **Y** N NN)
- Ethnic code B – Black (N N N **Y** N N)
- Ethnic code P – Pacific Islander/ Hawaiian (N N N N **Y** N)
- Ethnic code A – White (N N N N N **Y**)

Checks and Validations :

- VE - Race field is either empty/NULL or NNNNNN

Selection Criteria

PLEASE NOTE: Much of the data for this table comes from "views". A "view" is a stored query. It gets data from tables, AND is then referenced in other queries like it was a table. The structures of these views is property of SunGard Public Sector Pentamation, Inc. We do not have sufficient rights on the database to be able to access the structures of these views, so we don't really know what table or tables they are getting data from.
